

FV1000 CIRCULAR

The FV1000, which is a fully variable light, provides all of the same superior qualities of the FL1000, but it dims from 100% to about 5%. This helps you control glare, take pictures better or blend better light on your individual applications. The unit has a flicker free illumination and high frequency operation which allows photography and viewing through CCD cameras. The unit comes

standard with a 5600K anti-glare bulb or can be substituted for 6100K bulb for machine vision or ultraviolet bulb for special applications such as conformal coating and plating voids. Also available is our 3200K which mimics a fiber optic type bulb. The FV1000 has an easy in, easy out feature for the bulb so that it is easier to replace bulbs. The FV1000 is also constructed of ESD material like the FL1000.

Features

- ESD safe & RoHS compliant
- Dimmable intensity
- Hi-frequency ballast
- Flicker free
- Energy efficient
- Fits lens up to 2.35"
- MIL STD 2000A Certified
- Bulb replacement easy
- UV & Yellow bulb options
- Made in the USA
